

A scatter plot showing the relationship between $\log_{10}(\Delta)$ (y-axis) and $\log_{10}(\Delta_{\max})$ (x-axis). The x-axis ranges from 1.425 to 1.600, and the y-axis ranges from 1.400 to 1.600. The plot compares two groups of edges: Non-CL (grey dots) and CL edges (red dots, n=10). The CL edges are generally located at higher values for both $\log_{10}(\Delta)$ and $\log_{10}(\Delta_{\max})$ compared to the Non-CL edges. A dashed horizontal line is present at $\log_{10}(\Delta) \approx 1.405$.
